Monorotor Mixers

TECHNOLOGY ADAPTED TO EVERY PROCESS

PALAMATIC PROCESS ploughshare or blades mixers are an efficient solution to obtain a homogeneous and high quality mixture in a reduced time. Our mixers, dedicated to the mixing of dry powders and granules, are fitted with ploughshare or blade type tools creating a strong swirl of the product within the mixing chamber, and an extreme interaction between the materials to be mixed. The particular shape of the ploughshare creates a “3D” movement of the products introduced to the tank. Our range includes two models designed for:
- batches/discontinuous processes
- continuous processes
Both models share the same general architecture: a horizontal tank with a rotor fitted with a ploughshare or blade tool.

DISCONTINUOUS - BATCH MIXING

Featuring an advanced technology, ploughshare or blades batch mixers provide very good results in terms of speed and consistency of powder mixtures for discontinuous processes. Due to their high performance speed, they are among the fastest mixers with an average mixing time from 1 to 4 minutes. The performance of the batch mixer allows the mixing of materials with very low dilution ratios of the order of 1/100 000. Defloculating devices (additional stirrers) with high efficiency knives ensure a very efficient dispersion operation. Our batch mixer offers maximum flexibility and can easily be a part of a fully automated system or, conversely, a part of manual filling and emptying systems. The integral emptying hatch combined with the “Clean In Place” system (CIP) enables a rapid change of recipe without any cross-contamination and waste production.

CONTINUOUS MIXING

The monorotor continuous mixer is designed to mix uniformly and without interruption a wide range of particles (different in sizes or density) without any segregation of powders, granules or high viscosity mixtures. Extremely sensitive products are treated gently and micro-ingredients are mixed with great precision. This mixer works in a continuous way and is ideal for recipes with a limited number of components or for significant production processes. Its low energy consumption makes it one of the most economical mixers.

OUR MIXING TOOLS

MIXING PLoughSHARES

- Standard
- Serrated
- Casing

MIXING BLADES

- Smooth
- Serrated

Advantages

Maximum mixing homogeneity
No product degradation
Batch repeat accuracy
Short mixing time
Low maintenance

Advantages

Quality of mixing
High flow rate
Compact size
Short mixing time
Robust construction
Easy maintenance

Monorotor Mixer

**Capacity:** 75 to 3,000 litres

**Objectives:** short mixing time for high capacity and high quality mixing.

**MIXING OF 100% SOLID MATERIALS OR WITH LIQUID INCORPORATION UP TO HIGH VISCOSITY**

The horizontal single-shaft batch mixers are fitted with ploughshare or inclined blade type mixing tools to create a swirl in the mixture to engage all the particles in the mixing process. A high mixing accuracy is guaranteed since the dead zones and low-speed movements are avoided. The batch mixers MRS are used to mix powders, granules or short fibers for mstening, agglomerating, granulating or mixing liquids or paste products with low viscosity.

---

**TECHNICAL SPECIFICATIONS**

- Hygienic design
- Possibility to add up to 20% of liquid
- End bearing with sealing of the rotor available in different versions (optional air or nitrogen pressurizing)
- Tank manufactured in carbon steel, wear-resistant steel or 304L/316L stainless steel
- External finish in stainless steel: satin finishing, polishing, blasting
- Wide range of mixing tools
- Dispersion 20 gr./t.
- Max. homogenization of the mixing: number of Froude of 2.7

---

**OPERATING MODE**

The particular shape, the position and the rotational speed of the mixing tools generate a three-dimensional movement of the different particles present in the tank, favoring their dispersion and their mixing. The complete homogenization and high mixing accuracy are thus guaranteed, even when the particle size and the specific weight of the components are different.

---

</tr>
</tbody>
</table>

**Possibility of manufacturing mixing tanks with a capacity up to 15,000 litres**

---

**BEARINGS**

The bearings are made to hold and seal the shaft of the mixer to ensure its operation. The lantern ring blows air or nitrogen (in ATEX conditions) to prevent the introduction of fines in the shaft bearing mechanism.

---

**CHOPPERS**

**Choppers** are knives used for fast processes of mixing and homogenising of wet and dry materials in the pharmaceutical, chemical, cosmetics, food or plastics industries. These tools offer a high quality material thanks to their abilities of mixing and dispersion in one single operation. Installed next to the ploughshare, they can easily break down lumps and agglomerates thanks to their compact design with 4 arms. It is possible to use several choppers to enhance the performance of the mixing when incorporating liquid or pasty components.

---

**Discontinuous Monorotor Mixer**

**Blade chopper**

**Chalice chopper**

---

**Advantages**

- Low maintenance: easy cleaning and access to all the internal parts of the mixer
- Short time of mixing (1 to 4 min.)
- Excellent reproducibility of batches; maximum homogeneity of the mixings
- No product degradation

---

**Options**

- Temperature sensor
- Liquid injection device

See all our options on pages 16-17

---

The unloading door opening on the whole length of the mixer ensures complete draining with almost zero residual of the material in very short time.
Continuous mixing of materials

The continuous process is suitable for mixtures with a limited number of components and important manufacturing campaigns. The feeding of materials to be mixed is continuous, without interruption. MRSC continuous mixers are suitable for dry solids (powders, granules, short fibers), dry solids + liquids (moistening + granulating), sludges and low-viscosity pastes.

Management of rate and duration of stay of the material in the tank are carried out according to two technologies:

- The diaphragm valve, that is a controlled and sealed valve for powders, powdered or granulated material. It consists of a diaphragm which is held by rings at each end. The upper ring is fixed, while the lower ring rotates to gradually reduce the passage of the fluid via the central blade and provides a complete sealing. Height adjustment from the outside allows simple and easy setting of batch changing.

- The slide gate valve which cuts the passage of the fluid via the central blade and provides a complete sealing. The diaphragm valve, that is a controlled and sealed valve for powders, powdered or granulated material. It consists of a diaphragm which is held by rings at each end. The upper ring is fixed, while the lower ring rotates to gradually reduce the passage of the fluid via the central blade and provides a complete sealing. Height adjustment from the outside allows simple and easy setting of batch changing.

Process Integration

Our design office teams perform precise and detailed drawings of your installations via the Solidworks software for a perfect integration of the process in your site.

MIXING AND ENSURING HOMOGENEIZATION

PALAMATIC PROCESS meets the needs of manufacturers from various sectors. Petrochemical, water treatment, chemical, pharmaceutical, food or cosmetics. We offer the industrial mixer that meets specific needs of your production line.

The configurations of mixers are numerous: feeding with weighing tipers for raw material dosing, under big bag unloading structure, screw conveyor or sack tip unit, in-line on a pneumatic conveying system, upstream of a collecting hopper, a bagging machine, a drum filling installation...

Examples of Installations

SURFACE TREATMENT
Wear lining (Hardox), carbide charging of the tools, wear-resistant coating with easily replaceable plates, ceramic coating, Teflon® coating, stainless steel mesh.

INSPECTION HATCH
To monitor and control the mixing of materials. The inspection hatch allows to control and validate the quality of the materials mixing. In addition, the hatch provides easy access to all internal parts of the mixer to ensure complete cleaning.

LIQUID INJECTION DEVICE
For the addition of additive to the mix. The liquid spray device is located at the level of the ploughshares and the dispersers and thus enables the controlled addition of liquids in small quantities to the mix. The chopper, positioned beneath the device, creates a vortex for better dispersion of the liquid.

PNEUMATIC SAMPLING DEVICE
Validation of the quality of the batch. The sampler takes a sample of the mixture to verify its quality.

AIR OR NITROGEN BLOWING BOX
For the management of air or nitrogen blowing in. The pneumatic control box manages the speed and pressure of the air or nitrogen and ensures the sealing of the bearings.

DOUBLE CASING - HEATING / COOLING
To control the temperature of the mix inside the mixer. The double casing of the mixer allows heating of its contents through the circulation of the coolant fluid in the double casing, or cooling by circulation of chilled water.

STAINLESS STEEL, STEEL, FOOD-GRADE PAINT MANUFACTURING
Materials adapted to your process constraints. The manufacture of building materials in direct contact with the powders are set to be in line with their specificities.

DISPERSER
For agglomeration, granulating and coating process. Dispersers, also known as choppers or knives, are tools that break the lumps and agglomerates and allow the production of high-quality and homogeneous final product.

TEMPERATURE SENSOR
Set on the mixing tank. The temperature sensors transmit reliable temperature measurements for applications dealing with sensitive products (e.g., for sanitary/cosmetic/pharmaceutical applications).

DETACHED PRESSURIZED BEARING WITH AIR OR NITROGEN BLOWING
To ensure sealing of the shaft. To avoid the introduction of fines in the rotation mechanism of the mixing shaft, air or nitrogen is blown continuously at low rate and pressure through the lantern ring.

INTEGRAL DISCHARGE HATCH
For a full discharge of the mixer. The integral discharge hatch allows to limit cross-contamination by reducing the maximum retention of product in the mixer. Opening size: 15° or 60°.

PRESSURIZED TANK FOR LIQUID ADDITION
A pressurized tank allows the addition of liquid during the mixing phase. In order to ensure the introduction of fluids in the mix (e.g., water, ethanol …), we offer pressure tanks or metering pumps to ensure the spraying of the liquid amidst the mixture. This option must be combined with the implementation of choppers/dispersers.

Download videos & layouts from our website.
Monorotor Mixer

Ribbon Discontinuous

FOR LOW VISCOSITY DRY POWDERS AND PASTY MIXTURES

Ribbon or belt technology allows high-quality mixing at low speed. The products are preserved and the risk of overheating is reduced. The resulting low attrition allows to maintain the initial characteristics of powders or granules blended, such as density, particle size or shape. The mixing principle is based on cross and repeated exchanges in the longitudinal direction established by the helical belt of the rotor. The slow movement of rotation is particularly suitable for heat-sensitive, fragile and abrasive materials.

Options

Pneumatic control box
Heating/cooling casing

Advantages

• Gentle handling of the materials without any damage
• Homogeneity of the mixture
• Possibility to load the mixer up to 100%
• Possibility of complete discharge

TECHNICAL SPECIFICATIONS

- The discharging trap reduces any unmixed product retention (the gasket ensures sealing of the tank)
- The discharge trap is built-in into a tube for connection to any downstream system (gravity flow, lock, screw...)
- The operation of the discharge trap is carried out by a pneumatic control system including: pneumatic cylinder, distributor, coil, limit switch
- Dispersion 1 kg/ton

OPERATING MODE

There are two types of mixer loading:

- Loading by hopper/trough body
- Loading by cylindrical body

Biorotor Mixer

**Mixing and Homogenization of Several Materials (Successive Batches)**

The BPR double shaft mixer with blades is a continuous mixer with two parallel tanks, each fitted with blades which promote a homogeneous mixing regardless of the particle size and density. The intensive mixing action ensures, even with delicate or very brittle products, an optimal process without the formation of fine particles. The mixer can be started fully loaded.

**Operating Mode**

The horizontal rotors, which rotate in opposite directions, create a fluidization zone which ensures accurate mixing of products. The fluidization zone is generated by combining two technologies, the first in turbulence and the second in conveying. In these fluidized zones, powders and granules are dispersed optimally within a very short time. The double shaft mixer with blades, BPR, guarantees high performance in terms of homogeneity and mixing speed.

**Advantages**

- Shorter discharge time due to double discharge mouth
- Low residue (0-5.5% of the volume)
- Short mixing time (5-30 sec.)
- Easy cleaning

**Technical Specifications**

- Coefficient of variation reached (CV): less than 3%
- Mixing ratio: 1:100,000
- High homogeneity (CV < 5%)
- Bearing end with rotor sealing group in various versions with optional air or gas pressurization
- Double bomb bay discharge
- Robust mixing tank made of carbon steel or 304 L stainless steel

**Function**

The BPR batch mixer is used for dry solids (powders, granules, short fibers), dry solids + liquids (moistening, granulating, coating), as well as for liquid and low-viscosity pastes.

**Dimensions in mm.**

**Vertical Mixer**

**Biorotor**

**Capacity:** 1,000 to 5,000 litres

**Objectives:** Efficient mixing at variable filling levels

---

**MIXING SOLUTION FOR DRY, MOIST AND VISCOUS MATERIALS**

The double vertical shaft mixer offers a delicate treatment of dry, wet and sticky materials during mixing operations. The spiral blade of the vertical mixer activates a three-dimensional mixing of materials. This mixer can be used for dry powder, wet suspensions, liquid or pasty materials.

---

**Advantages**

- **Clean In Place (CIP)**
- **Multiple materials inlets are possible**
- **Polishing of welded components for hygienic finish**
- **Can be installed on load cells for dosing**

---

**DIMENSIONS in mm**

---

**Technical Specifications**

- Vertical move of the product
- Soft stirring of all the contents
- High quality mixing and short cycles
- Filling level from 10% to 100% of the volume
- Minimum space between the walls and belt to prevent any product agglomeration
- No retention, continuous movement of the materials to be mixed

---

**Options**

- Load cells to inform the process about the amount of powder introduced
- Inspection hatch

---

**Mixing capacity (l.)**

The vertical mixer with single shaft performs quality mixing of dry, moist and viscous materials. This mixer is ideal for the food industry as it complies with hygienic standards. It provides excellent mixing results, regardless of the materials to be mixed, through the helical movement of the central blade.

**HIGH MIXING QUALITY DUE TO THE THREE-DIMENSIONAL EFFECT**

**MIXING LINE AND BABY FOOD HOMOGENIZATION**

**Client:** Food factory  
**Materials:** Milk powder and vitamins  
**Installation details:** Loading of the ingredients packed in big bags and sacks with pre-weighing in a dedicated room to ensure complete hygiene.

**PRODUCING A PREMIX FOR SPREAD MANUFACTURING**

**Client:** Dairy products  
**Materials:** Milk powder, sugar, alginate cocoa  
**Installation details:** Preparation and mixing line with manufacturing in masked time for introduction into a powder disperser. This technology was chosen for its cleanability and sanitation characteristics considering the absence of bearing in the product. The prepared mixture is packed in containers thus allowing management of masked time.
Conical Screw Mixer

Capacity: 50 to 5,000 litres
Objective: sticky liquid mixture or wet, pasty or powdery materials

DELICATE MIXING AND BLENDING, SIMULTANEOUS STORAGE OF MATERIALS

The CV mixer is a conical mixer with high mixing efficiency. It allows the delicate mixing of products, while ensuring the highest level of accuracy without deterioration. CV mixer is based on a three-dimensional action produced by an axis suspended from a rotating arm inside the conical tank combined with the rotation of the axis itself. This equipment is suitable for intermediate product storage, combined with temporary homogenization.

OPERATING MODE

Mixing is carried out by means of three separate actions:
1) Mixing screw, rotating on its axis, produces a lifting action of materials
2) At the same time, the screw turns in orbit around the vessel, removes the materials from the wall and directs them to the center of the vessel
3) The materials, detached by the screw, gravitate downwards and are mixed thoroughly with those lifted by the axis.

The cleaning of this type of mixer is a significant asset for manufacturers carrying out frequent recipe changes.

TECHNICAL SPECIFICATIONS

- Mixing vessel made of steel, stainless steel 304L/316L
- Surface finish: satin finishing, polishing, blasting
- Manual cylinder or pneumatic actuator for knife gate valve
- Adjustable knife gate valve
- Adjustable flow
- Minimum residual material in case of complete emptying
- Possibility of a mobile mixer

DIMENSIONS in mm.

Options

- Manual discharging valve
- Access door

Advantages

- Compact size
- Mild mixing, respect of the materials
- Minimum residual material
- Low power consumption

IBC Blender

Technical Characteristics

Rate: 4 to 10 revolutions/min.
Capacity: 200 to 1,500 liters
Objective: homogeneous mixing, no material loss

FOR A HOMOGENEOUS, QUICK AND EASY MIXING OF YOUR POWDERS

Our IBC blending stations are specially designed for pharmaceutical and food industries in which the constraints of cleanliness and hygiene are high. Our equipment offers high mixing performance for a wide variety of powders, while maintaining the quality of your material and avoiding the mechanical action of the standard mixers.

TECHNICAL SPECIFICATIONS

Control: fully automated system with touchscreen. Automatic acceleration at start and deceleration at stop with the frequency variator and the dynamic braking module. Control elements include the indication of “rpm”, the cycle duration, start, pause, lock/unlock position. The mixing program can be selected from pre-programmed cycles.
Engine: variable frequency with adjustable rotations from 4 to 10 rpm.
Security: a safety lift barrier can be provided to ensure the safety of the operator by prohibiting its access.

OPERATING MODE

1. Loading of the container by forklift onto the mixing platform
2. A sensor checks the locking of the system and the closure of the conical valve
3. The mixing is performed by continuous rotation of the container around its central axis

Biorotor Mixer

Rate: 4 to 34 m³/hr.
Objectives: homogenization and mixing of dry or wet materials

SIMULTANEOUS CONVEYING AND MIXING OF TWO OR MORE PRODUCTS

PALAMATIC PROCESS: continuous mixer with overlapping blades is ideal for homogenization and mixing of dry or wet materials. These machines, of simple and robust design, are fitted with double parallel rotors and ensure the mixing of two or more materials but also their conveying during the mixing process. These mixers are ideal to carry out neutralization of sludge with time, moistening of dust, extinction of quicklime etc..

Motization
Material inlet
Pallets
Clamp
Material outlet
Support bearings with sealing by stuffing box

Most common application
- Powder handling
- Sludge granulation
- Inerting of sewage sludge
- Conditioning of dust, ash and sludge of industrial origin (metallurgy, fly ashes)

This mixer enables sludge handling with quicklime or dead time.

The horizontal shaft continuous mixers consist of:
- a mixing vessel equipped with a filling mouth
- a discharge mouth
- two mixing rotors
- two end closure plates
- detached end bearings with passage of the shaft by packing gland
- gear units with power transmission

Homogeneous conveying and mixing
Self-cleaning rotors thanks to overlapping blades
Adjustable blades with or without wear protection
Powers adapted to demand

TECHNICAL SPECIFICATIONS
- Possibility to add up to 20% of liquid material
- Robust mixing tank made of carbon steel or stainless steel 304 L/316 L
- Trough shaped tank with bolted or welded flanges
- Gasket at the passage of the shaft supporting the rotor, external bearings
- Driven by gear motor with hollow shaft or coupling

OPERATING MODE
Double shaft mixers with blades BRPC are adapted to dust mixing, granulation, neutralization of sludge and moistening of dust, ash or sludge. The overlapping of the blades and the adjustment of their inclination ensure a very good adaptation to the products to be mixed. The continuous mixer is made of a tank which contains two parallel rotors fitted with blades which intersect during operation thus covering the entire surface of the trough. The start of the mixer is also possible when fully loaded.

PALAMATIC PROCESS designs mixing tanks for preparing lime milk or activated carbon slurry. Our offer includes the incorporation of carbonate in smoke ducts, activated carbon dispersion or urea dissolution. The stirring methods we offer are various: homogenization, dissolution, suspension, dilution, flocculation...

- Lime milk preparation
- Urea Dissolution
- Activated carbon treatment
- Sludge processing/Conveying/Storage/Cooling
- Smoke treatment

Typical diagram of a sludge liming facility.
Examples of Installations

**PACKAGING OF SUGAR IN BIG BAGS**

*Client:* Agrifood industry  
*Materials:* Baking powder and vanilla sugar  
*Objectives:* Process designed to control the feeding of a big bag loading station - 6 batches/hour.  
**PALAMATIC PROCESS equipment:** Sack tipping unit with buffer hopper, conveying cyclone of a capacity of 20 litres, dedusting system connected to the sack tipping unit and the big bag loading station, mixer on a handling base and nozzle for liquid incorporation, security vibrating sifter at the outlet of the mixer, pneumatic conveying system for feeding the big bag loading station installed on weight cells with a handling base.

**SUGAR PROCESSING LINE**

*Client:* Cookies Manufacturer  
*Material:* Granulated sugar  
*Objectives:* Reduction of the particle size of the product.  
**PALAMATIC PROCESS equipment:** Manual sack tipping unit with integrated vibratory sifter for removal of agglomerates, tubular screw conveyor, mill to reduce the granulometry of the material, threshing hopper with monorotor belt mixer, dust extraction system with explosion vent, rotary valve to stop the fire in case of explosion, inflatable seal for total containment when filling the sacks and weighing tray for automatic management of the filling process.

**PROCESS LINE AT THE OUTLET OF ATOMIZATION TOWER**

*Client:* Organic seaweed culture  
*Materials:* Dry seaweed  
*Objectives:* Milling of seaweed with collection of the powders in sacks or big bags under the separation filter.  
**PALAMATIC PROCESS equipment:** Mill with independent dedusting unit, pouyès ring, monorotor belt discontinuous mixer, rotary valve for dosing and weighing tray.

**SUGAR PACKAGING LINE**

*Client:* Rusks manufacturer  
*Materials:* Cane sugar, cocoa powder, corn starch, cinnamon, praline powder  
*Objectives:* Feeding of the mixer with cane sugar, cocoa and other additives.  
**PALAMATIC PROCESS equipment:** Standard bag emptying hopper, buffer hopper, gearbox for conveying the material to the cyclone, horizontal belt ribbon blender with a screw with two inverted axes.

**IBC BLENDER FOR FLEXIBLE LINE**

*Client:* Manufacturer of ceramic materials  
*Materials:* Refractory bricks  
*Objectives:* Homogeneous material and regular change of recipe.  
**PALAMATIC PROCESS equipment:** Mixers are manually filled by the operator in order to comply with each recipe. According to the application, changes of materials are very frequent thus justifying this conception of line. The containers, after mixing operation, are positioned on a packaging unit to provide customers with ready-to-use bags.

PAL’TOUCH® TECHNOLOGY

Designer of specific equipments, PALAMATIC PROCESS associates programmed PLCs with its production units in an ergonomic and visual way. The production control is as important as the result. That is why automation and IT engineers of PALAMATIC PROCESS review the raw material feeding, the batches traceability, operators identification and dosings database. Thanks to continuous exchanges during the phase of project execution, between your production team and our engineering office, screens for packaging lines control offer ergonomic and easy use with unique personalization.

Equipment and programs used: Schneider, Siemens, Rockwell, Omron, Philips, Intouch, Pc View, VijeoDesigner...
Our test center is made up of the latest machinery of the powder handling sector. Specialist engineers are there to advise you on the industrial processes best suited to your requirements and to guide you at every stage of the decision to design the most efficient installation. Our mixer, available for trials, may be tested as a unit or integrated in sieving, pneumatic conveying or packaging solutions.

3 STEPS TO VALIDATE YOUR PROCESS

Step 1 - Before Test
- Select the likely optimal machine configuration based on your technical requirements (powders, flow rate, dosing)
- Draft test proposal by our sales-engineers representatives

Step 2 - During Test
- Process validation for product testing
- Perform testing and sample collection
- Discussion on results after the test with machines (phase diagram, degradation tests, fines content)

Step 3 - After Test
- Analysis of machine test data and samples
- Write a summary report
- Collaborate on the optimal solution for your requirements
- Submit a quotation

THE BENEFITS OF MECHANICAL TESTING

- An individual consultation with and on-going support by our R&D engineers
- Confirmation of the appropriate machines to conduct a test with your product
- Tests at various operating conditions to define the most efficient process according to your industrial requirements
- Evaluation of the profitability of equipment configuration
- Possibility to test additional options using PALAMATIC PROCESS® range of products
- Maximize the return on your investment
- Maximize the optimum selection of the proper machine
- Capitalize on the wide experience of our experts

300 + than 300 configurations

TEST PLANT

Our test plant is located in the heart of the head office of our company. Each device has been carefully designed to meet the needs of our customers. Because your satisfaction and the performance of our solutions are important criteria for us, our engineers paid particular attention to the details of our installations to ensure total success of your projects.
Our expertise:

- **FILLING SOLUTIONS FOR BIG BAG AND OCTABIN**
  To fill

- **EMPTING SOLUTIONS FOR BIG BAG AND OCTABIN**
  To empty, compact and massage

- **SACK, DRUM AND CARDBOARD FILLING SOLUTIONS**
  To fill, package, handle

- **SACK AND DRUM EMPTING SOLUTIONS**
  To empty, compact, handle, discharge

- **SOLUTIONS FOR PNEUMATIC CONVEYING**
  Vacuum, pressure

- **SOLUTIONS FOR MECHANICAL CONVEYING**
  To transfer with screw, belt conveyor, bucket elevator, aeromechanical or vibratory conveyor, truck loading spout

- **CRUMBLING AND GRINDING EQUIPMENT**
  To granulate, crumble, grind, pound, micronise, disagglomerate

- **SIFTING EQUIPMENT**
  To sift, segregate, sieve, protect

- **CONTAINERS AND STORAGE SOLUTIONS**
  To fill, charge, empty, contain

- **DOSING EQUIPMENT**
  To control, regulate, empty, extract

- **MIXING EQUIPMENT**
  To homogenise, incorporate, fluidify, stir, mix

- **FLOW AND CONNECTION**
  To vibrate, fluidise, unclog, drain, facilitate extraction, control the descent, prevent stacks and vaults, connect

- **INDUSTRIAL DUST COLLECTING EQUIPMENT**
  To filter, clean, confine, secure
